

Amaan Khan

Full-Stack AI Engineer | Founding Engineer | Enterprise AI Products

+91-8999650554 | amankhanak063@gmail.com | github.com/Amaan2210 | linkedin.com/in/amaan-khan-gsm | Portfolio

PROFESSIONAL SUMMARY

Full-stack AI engineer with 3+ years building enterprise AI products at **Naya Studio** (Allston, MA). As **Founding Engineer**, solo-built Naya's **AI Cost Estimation** product; its codebase became the foundation for **client-specific Forward-Deployed Engineer (FDE) forks** (MillerKnoll, Schneider Electric, NAC), driving **\$500K+ in signed global enterprise contracts**. Founding Engineer on **Sustainability AI** (Beta 2026). Built Workflow's multi-provider AI generation (**10 providers, 50+ models**), multimodal **LangChain** ingestion, semantic search, and real-time collaboration powering a **\$200K+ Adidas deal** and additional MillerKnoll ARR.

EXPERIENCE

Software Developer

Naya Studio (AI-native product startup) | [naya.studio](#)

Nov 2022 - Present

Allston, MA - Remote

Cost Estimation (Founding Engineer, Q4 2025 - Present)

- **Solo-built** the main **AI Cost Estimation** product repo from architecture through production launch as **Founding Engineer**; codebase became the foundation for client-specific FDE forks (MillerKnoll, Schneider Electric, NAC), supporting **isolated, client-specific enterprise deployments** and **\$500K+ in signed contracts**. **4,000+ estimations** run in active production.
- Designed sequential **8-stage LLM workflow** in **Node.js** with editable intermediate outputs, per-stage **MongoDB** state persistence, user-selectable **Anthropic Opus** / **Google Gemini** execution, **Firebase** asset storage, PDF reporting, and **Sentry** observability on **GCP** via **CI/CD**.
- Built **markdown-driven industry knowledge system** across **16 verticals** via expert collaboration, loading domain context at the initial classification step to raise pipeline accuracy without model fine-tuning.

Sustainability AI (Founding Engineer, 2026)

- Reused Estimation's pipeline infrastructure to launch **Sustainability AI** (Beta 2026), a **Carbon, Water, Plastic, and Energy** analysis product for Naya's enterprise customers.

Workflow Platform (Software Developer, Nov 2022 - Present)

- **Built and scaled** Naya's multi-provider AI generation platform to **10 providers, 50+ models** (OpenAI, Anthropic, Google Gemini, Stability AI, Meshy, Hunyuan) across text-to-image, text-to-3D, and image-to-3D; powered a **\$200K+ Adidas deal** plus additional MillerKnoll ARR through enterprise deployments.
- Engineered custom **Hunyuan 3D service** bypassing Tencent API limits, enabling lower-cost enterprise-grade 3D generation and reducing licensing dependency.
- Built **multimodal ingestion pipeline** using **LangChain** to process images, videos, and links into structured search embeddings; shipped AI-powered **semantic search** combining document summarization with Algolia for enterprise repositories.
- Designed **Sleep Mode** (DOM offload on user inactivity) eliminating long-session tab crashes for returning users while preserving session state; combined with **React** virtualization, lazy loading, Cloudinary, and code-splitting to deliver **90% image-load improvement, 50% page-render speedup, and 500MB+ memory reduction**.
- Implemented **Microsoft Office (WOPI)** for in-platform Word/Excel editing (Adidas) and **Google Drive / SharePoint** storage integrations for enterprise clients.
- Built **real-time collaboration** in **TypeScript** using WebSockets, **MongoDB** Change Streams, and **YJS** for simultaneous multi-user editing; engineered **Python cloud functions** for CAD format conversion and ingestion pipelines.

TECHNICAL SKILLS

Core Stack: React, TypeScript, Node.js, Python, MongoDB

AI Providers & Models: Anthropic (Opus), OpenAI, Google Gemini, Stability AI, Meshy, Hunyuan (10 providers, 50+ models)

AI Engineering: LLM orchestration, prompt engineering, multimodal ingestion (LangChain), semantic search, embeddings, document summarization, Algolia

Backend & Distributed Systems: REST APIs, WebSockets, MongoDB Change Streams, YJS, Cloud Functions, pub/sub patterns

Enterprise Integrations: Microsoft Office (WOPI), Google Drive, SharePoint

Infrastructure & Deployment: GCP, Firebase, Docker, CI/CD, Sentry, Cloudinary

EDUCATION

Bachelor of Technology in Computer Science and Engineering

Swami Ramanand Teerth Marathwada University (SRTMU)

2019 - 2023

Maharashtra
